HPE APPROACH TO O-RAN

~INFRASTRUCTURE MANAGEMENT SOLUTION FOR 5G O-RAN ROLL OUT~

Hewlett-Packard Japan, GK
Communications Technology Group
Senior Consultant
Koji YAMAMOTO

October 7, 2022

AGENDA

1. HPE APPROACH TO O-RAN

2. RAN DISAGGREGATION CHALLENGE

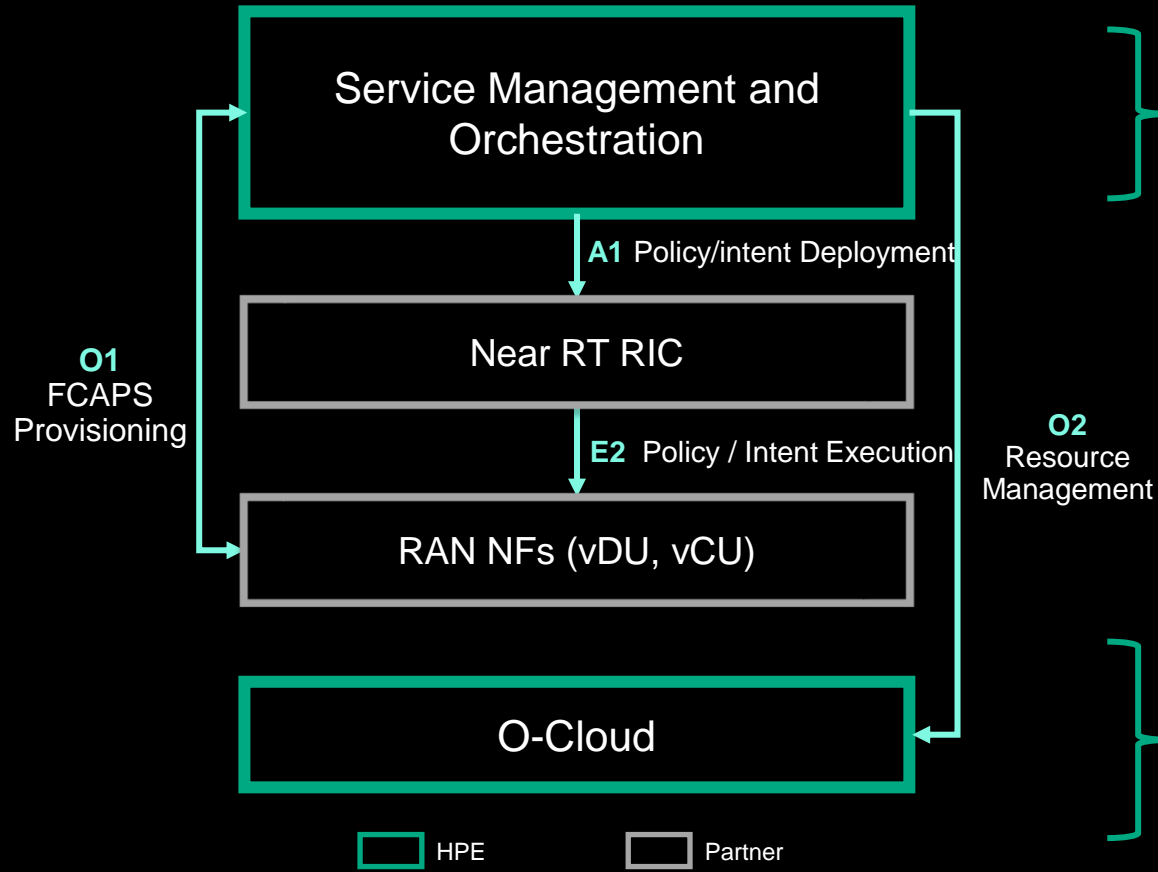

3. APPROACH FOR CHALLENGE AT O-RAN ROLL OUT

4. SUMMARY

HPE APPROACH TO O-RAN

O-RAN SMO and O-RAN Optimized Infrastructure

HPE RAN Automation

HPE ProLiant DL110 Gen 10 Plus

HPE ProLiant DL360 Gen10 Plus

HPE ProLiant DL380 Gen10 Plus

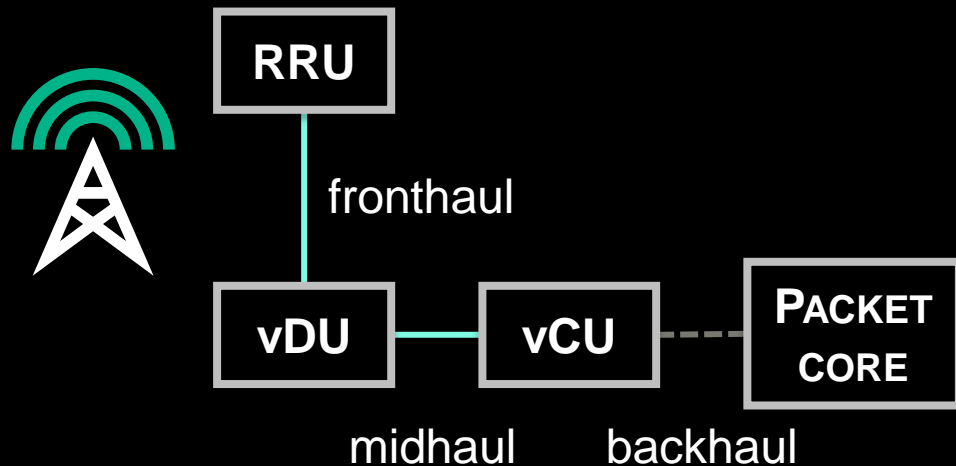

WHY VRAN / ORAN INITIATIVE IS IMPORTANT TO CSPS?

Expecting benefit by disaggregating RAN

RAN Disaggregation

- Disaggregate RRU from rest of the network, functional split gNB to DU and CU
- Virtual functions (vDU, vCU) on COTS hardware
- Multi-vendor configuration, operation automation by Open Interface

Reduce TCO with workload-optimized servers and RAN software

Embrace end-to-end automation to deploy, configure, and manage RAN

Open RAN to new opportunities for innovation avoiding vendor lock-in at all layers

RAN DISAGGREGATION CHALLENGE

RAN roll out and life cycle management

Volume & Time

- Deploy a large scale of RAN sites and servers
- Lifecycle management and orchestration for large number of software (vDU/vCU, CaaS, OS, firmware, UEFI)

Complexity & Technology

- Wide variety of setting parameters combination across multi-vendor RAN NF, CaaS, and hardware
- Various configuration pattern by DU/CU multiple deployments scenario
- Convergence of Network and IT architecture (Virtualization, Cloudification)

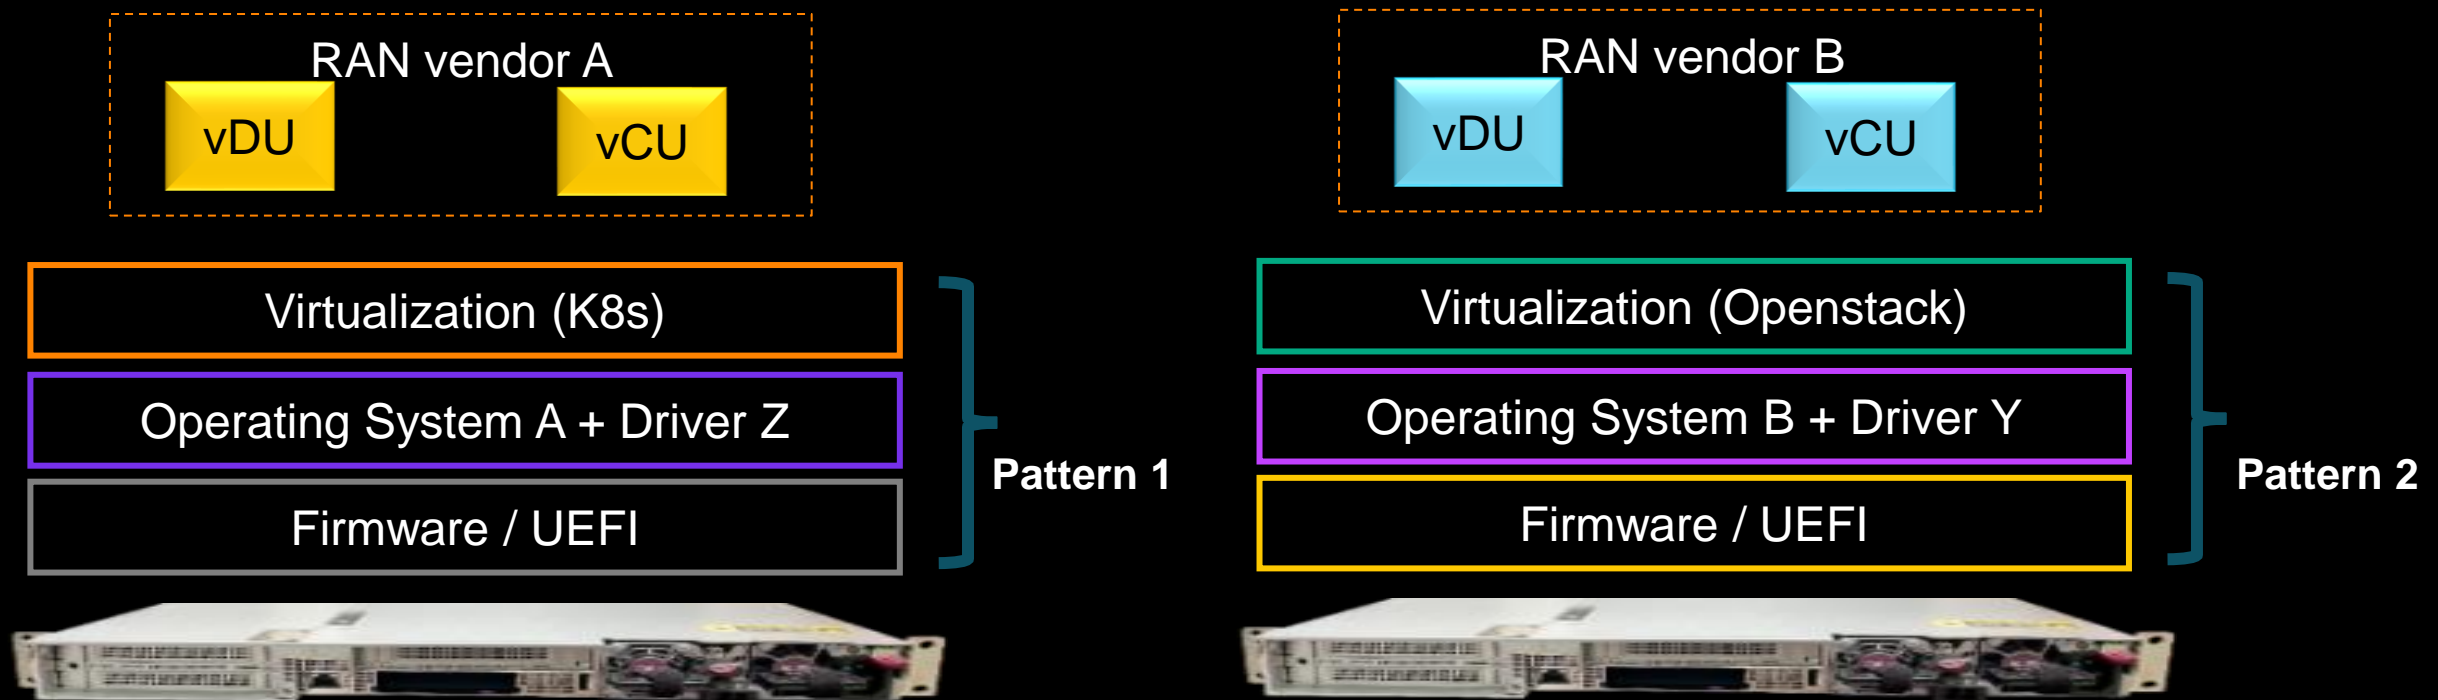

People & Processes

- New operation skill
- New operational process
- Security concerns

INFRA MGMT CHALLENGE AT MULTI-VENDOR DEPLOYMENT

Wide variety of pattern for setting parameters combination and procedure

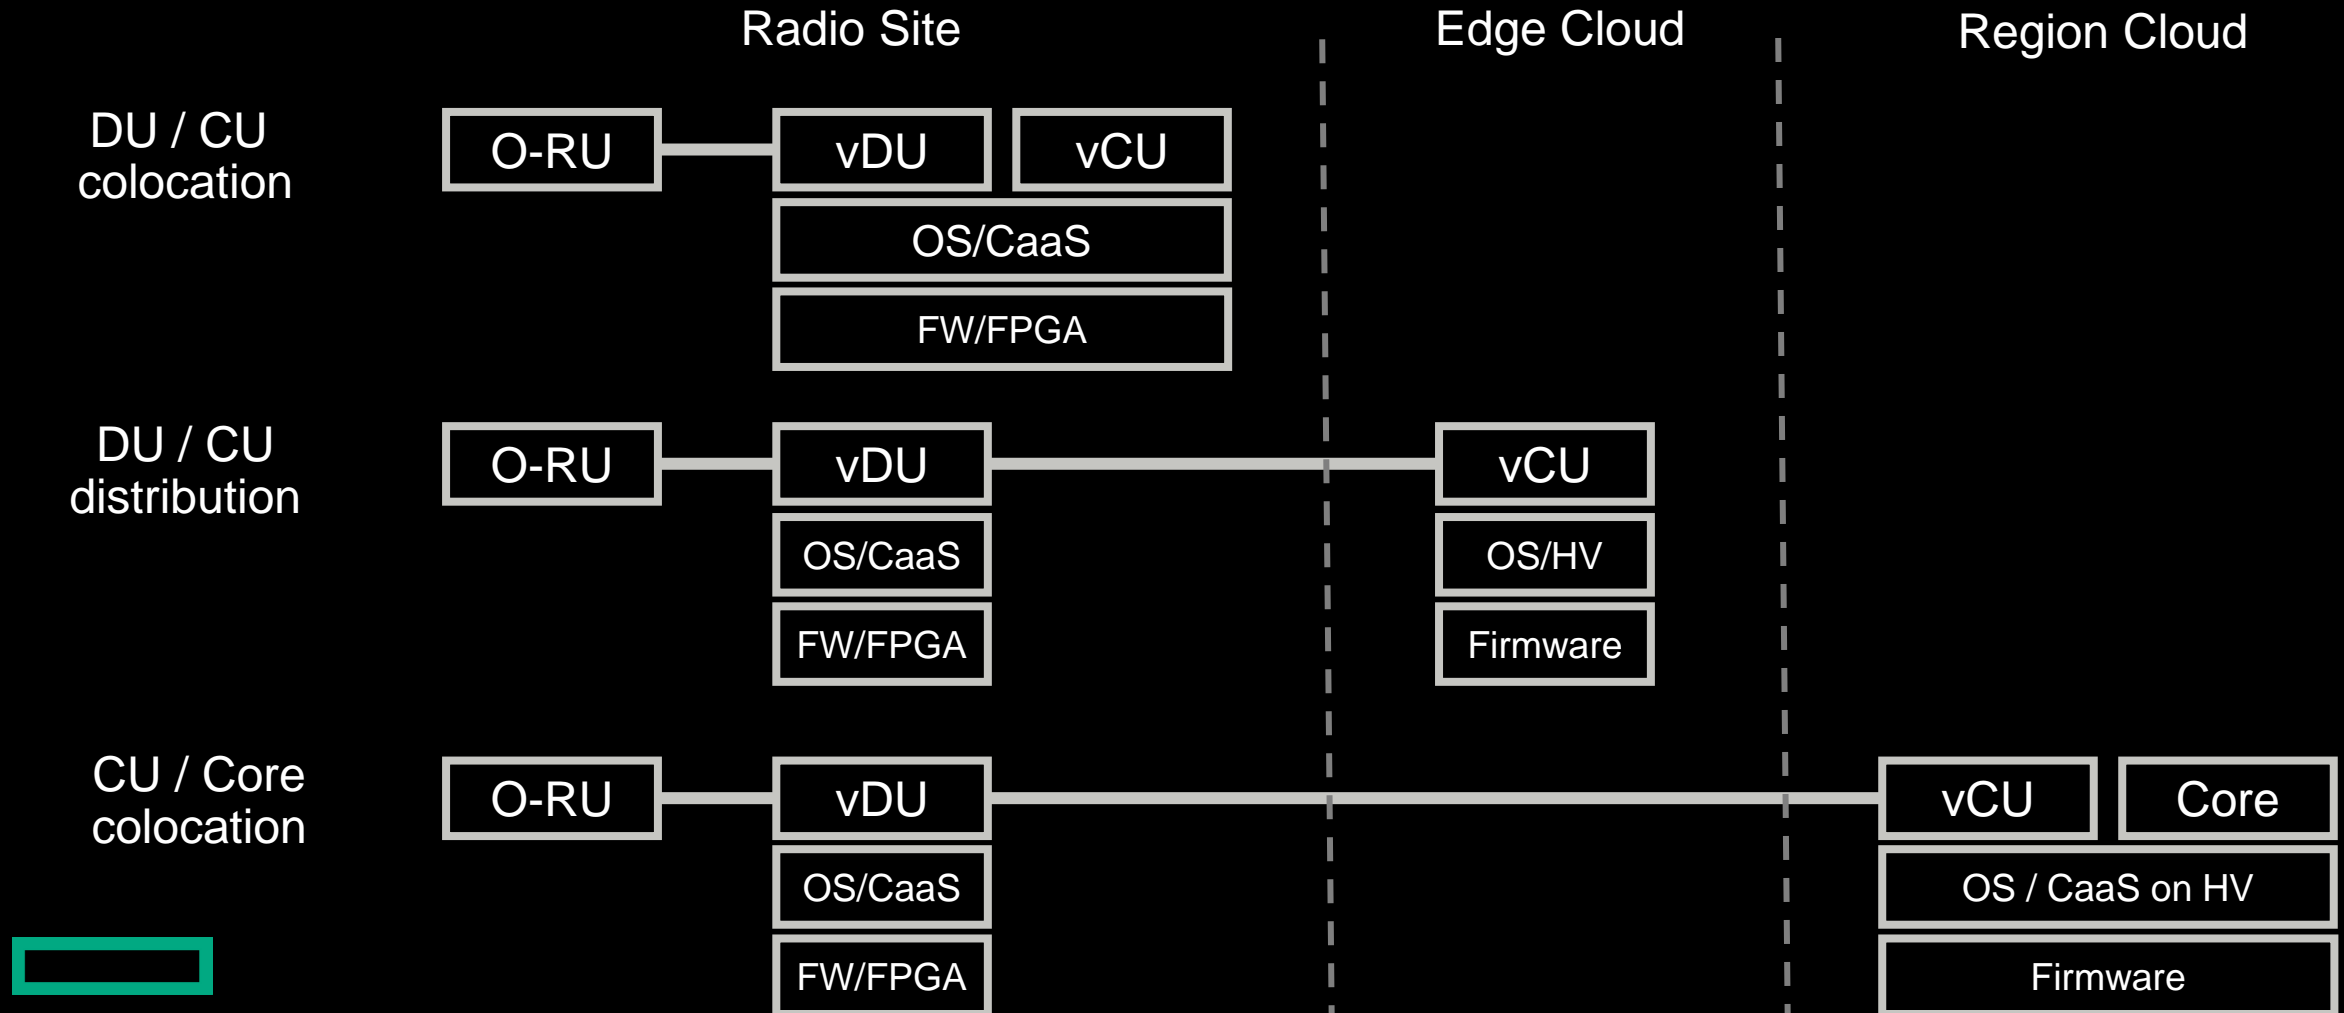

- Infra configuration parameter and procedure are specified by RAN vendor as vCU / vDU requirement
 - Software version of Firmware, UEFI, OS, Driver, virtualization platform, etc
 - Configuration parameters for OS, Driver, virtualization platform

INFRA MGMT CHALLENGE AT VDU/VCU DEPLOYMENT SCENARIO

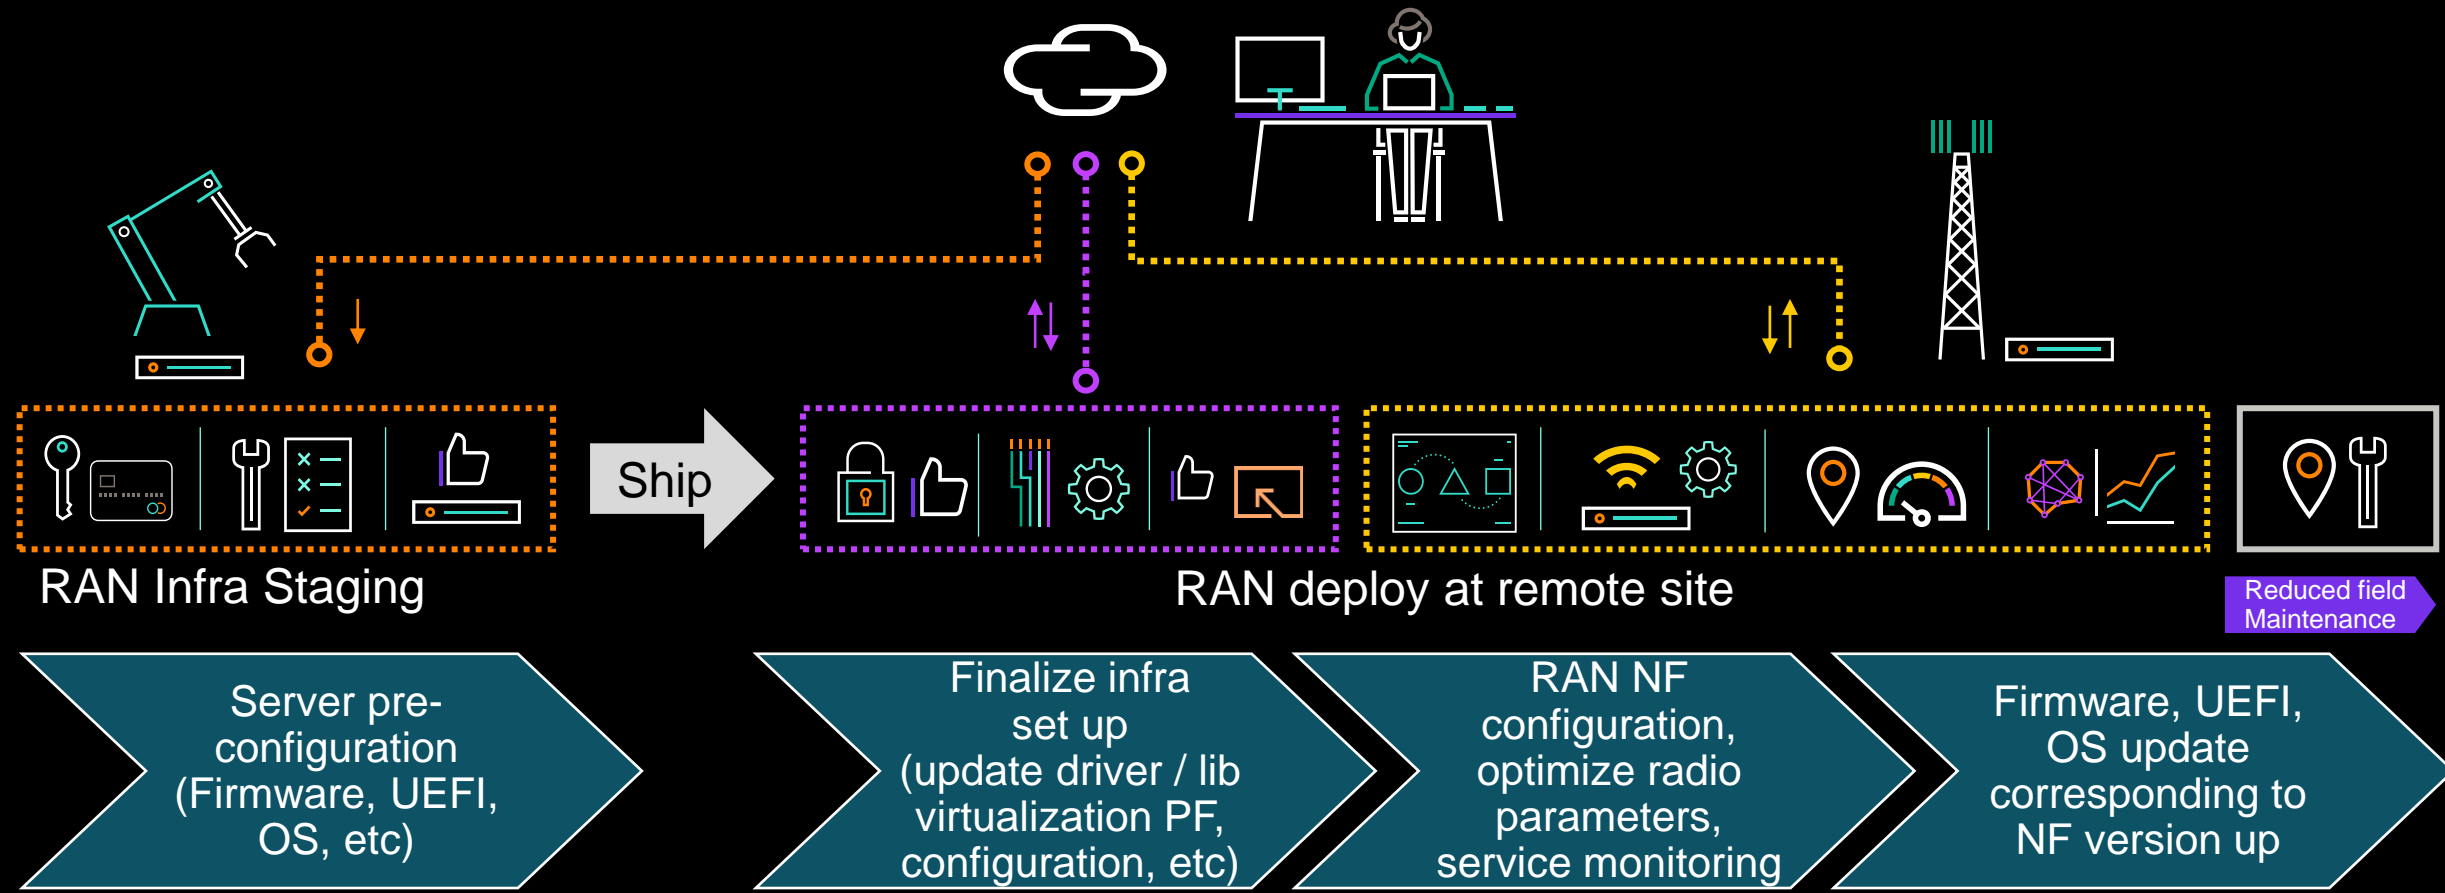

Various configuration pattern by vDU / vCU multiple deployment scenario

- Infrastructure configuration and the parameters will be vary corresponding to vDU / vCU deployment patterns

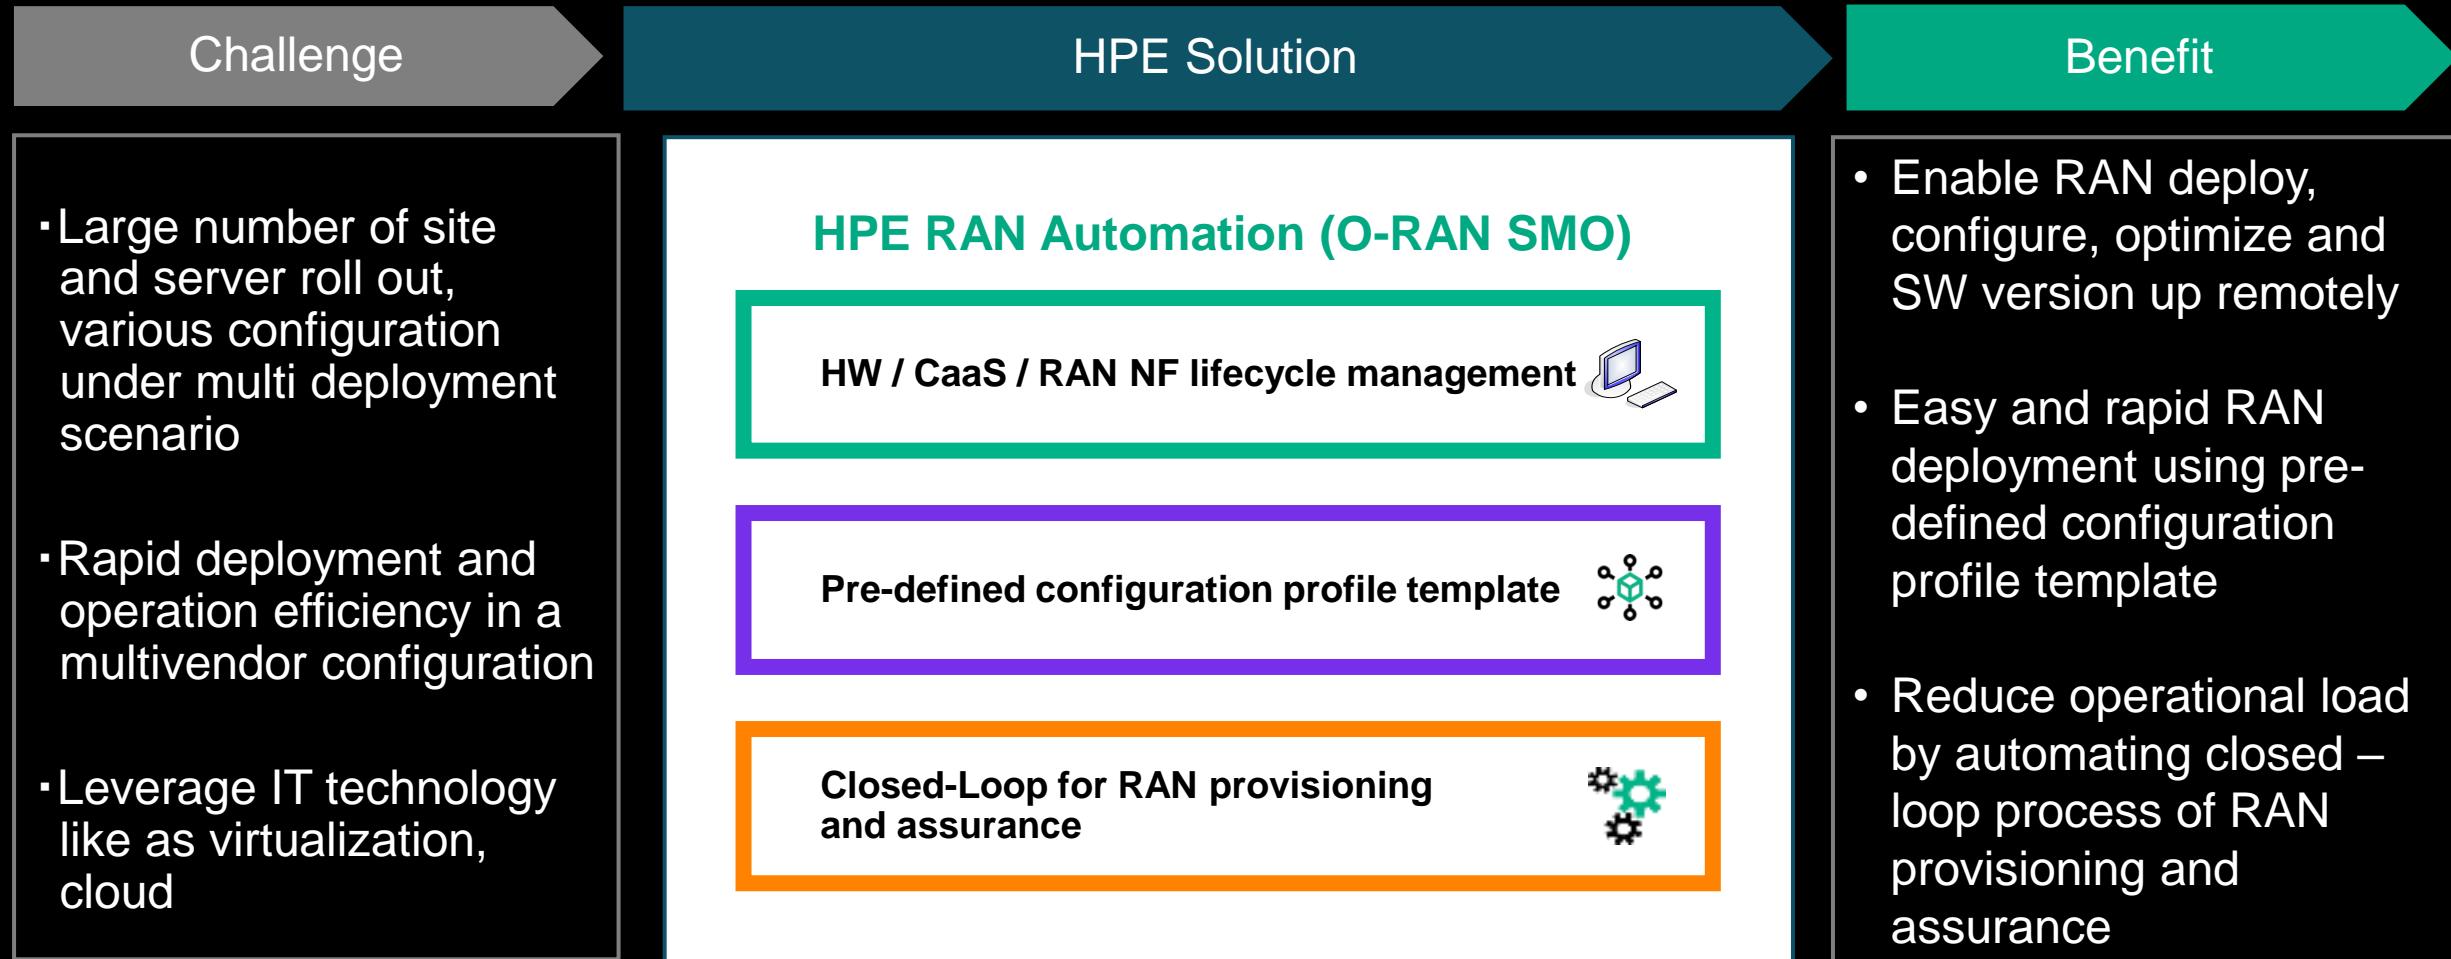

INFRA MGMT CHALLENGE AT RAN ROLLOUT AND MAINTENANCE

Remote infra management at initial deployment and version up

APPROACH FOR CHALLENGE AT O-RAN ROLL OUT

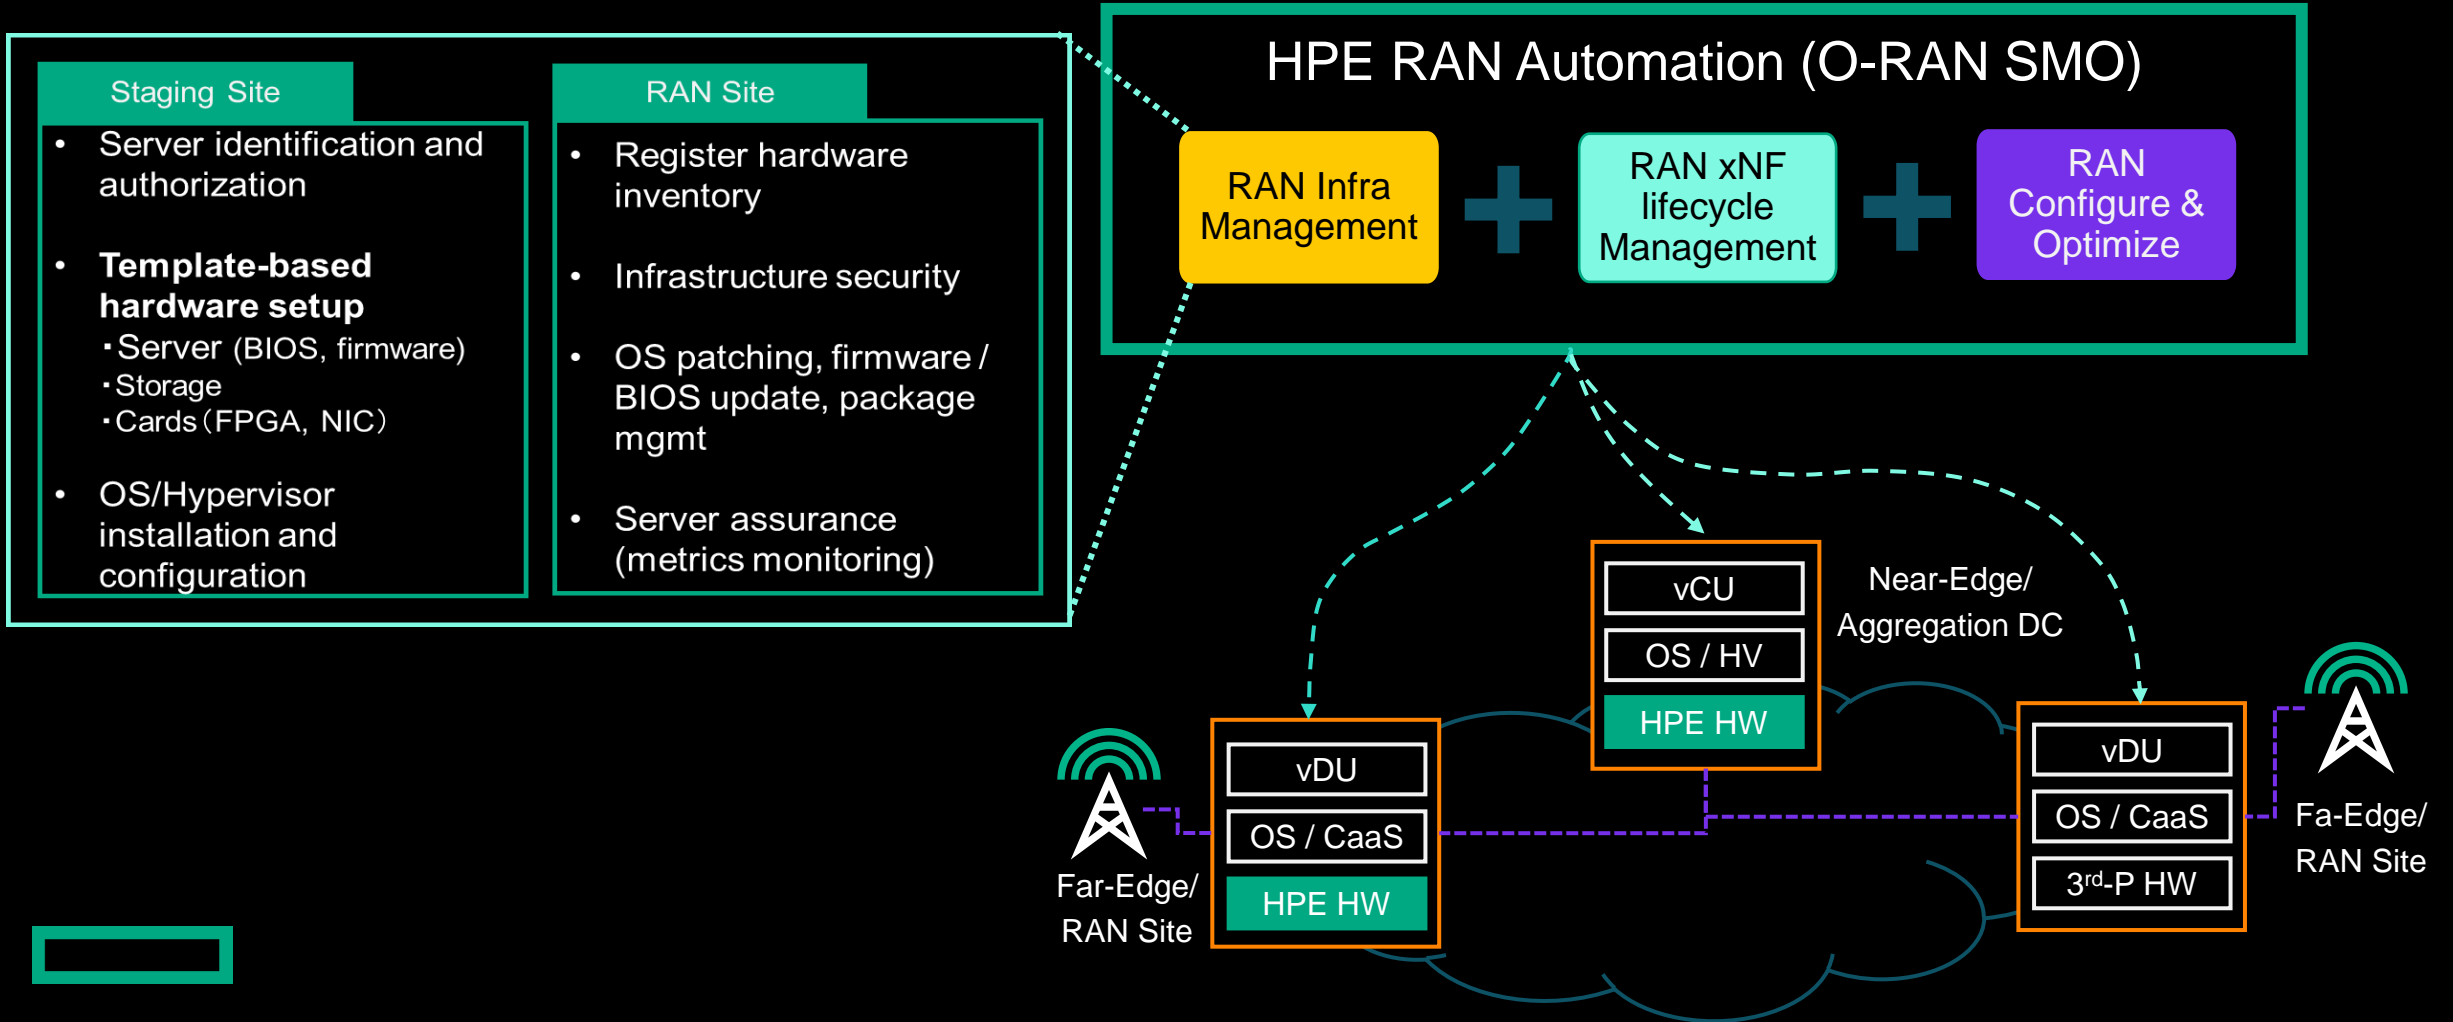

SMO to automate RAN Infrastructure and Application lifecycle management

HPE APPROACH FOR O-RAN INFRASTRUCTURE MANAGEMENT

O-RAN SMO solution for multi-vendor management and automation in disaggregated RAN

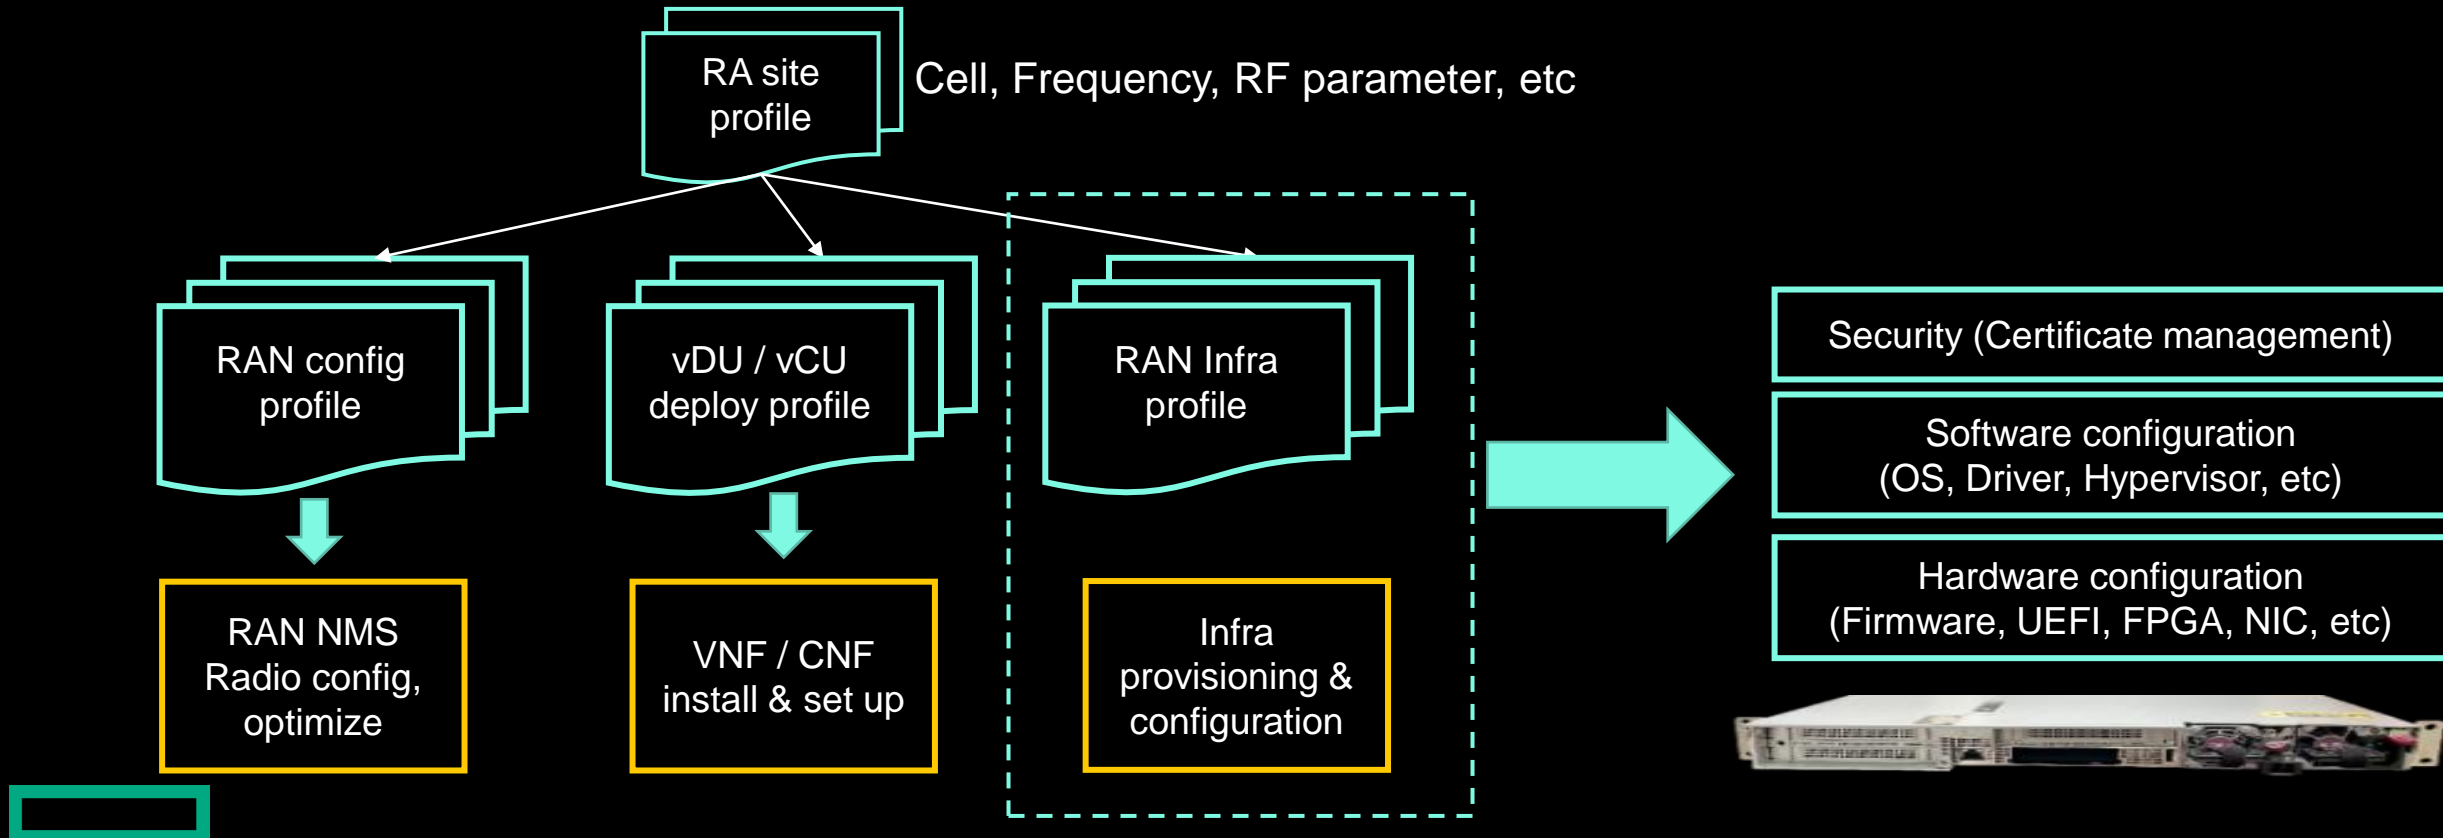

Enable RAN site deployment easy and efficient by providing pre-defined configuration profile template

HPE APPROACH FOR O-RAN INFRASTRUCTURE MANAGEMENT

Manage RAN site configuration with pre-defined configuration profile template

- Provide profile template for installation & configuration of RAN site, RAN Software, RAN Infrastructure and manage these centrally
- Automate E2E provisioning with pre-certified combination of hardware and software
- RAN Infra profile template has HW & SW install procedure flow and configuration the parameters

SUMMARY

CSP's expectation to O-RAN

Reduce TCO with workload-optimized servers and RAN software

Embrace end-to-end automation to deploy, configure, and manage RAN

Open RAN to new opportunities for innovation avoiding vendor lock-in at all layers

Challenge

Large number of site and server roll out, various configuration under multi deployment scenario

Rapid deployment and operation efficiency in a multivendor configuration

Leverage IT technology like as virtualization, cloud

HPE Solution

Remote RAN deploy, configure, optimize and SW version up remotely

Easy and rapid RAN deployment using pre-defined configuration profile template

Reduce operational load by automating closed-loop process of RAN provisioning and assurance

THANK YOU
